Im a cable technician that works 70-80 hrs a week. I bought a 1985 BMW 535i that need alot of work. I originally brought in the car just for the engine to be replaced. They worked with me over the phone and internet inwhich was a very big help to me because of my schedule. They gave me alot of options and good pricing.

I was so impressed by the service that I had them also do the suspension work, heatercore work, they replaced an engine mount, clutch, water pump, starter, steering pump, oil pan gasket and a new exhaust system. They even tested my alternator, radiator and other components to make sure they where good. It's always cheaper to replace parts when the engine is out and have it done right.

Special thanks to Kai for taking the time and answering questions when I did get the chance to stop in and check on the car. It's awesome to have a mechanic that's just as excited about the car as you are.

Thanks, Jesse Lockard
